PREDIS: INNOVATIVE WAYS FOR PRE-DISPOSAL TREATMENT AND MONITORING OF LOW AND MEDIUM RADIOACTIVE WASTE

Ernst Niederleithinger¹, Vera Lay¹, Christian Köpp¹, Erika Holt², Maria Oksa²

¹BAM ²VTT
Safety in technology and chemistry

BAM is a senior scientific and technical federal authority with responsibility to the Federal Ministry for Economic Affairs and Energy (BMWi)

This project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No 945098.
Our tasks

Research, testing and consultation under one roof

Statutory duties for technical safety

Consulting the German Federal Government and Industry

Research and development

Contribution to standards and statutory regulations

Testing, analysis, approval

Technology transfer

This project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No 945098.
One of five focus areas

Activities
- Energy storage
- Energy conversion
- Energy transport
- Nuclear waste management

This project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No 945098.
BAM Division 8.2
NDT methods for civil engineering

- Development, optimization and application of non-destructive testing methods for inspection and monitoring of all kinds of constructions
- Methods: Ultrasound, Radar, LIBS, embedded sensors
- Combination with competencies of other divisions (fiber optics, AE, NMR, CT/X-Ray, half cell potential: We have it (almost) all! Automatisierung, Digitalisierung
- Application focus: Infrastructure & buildings, new constructions methods and materials, nuclear constructions
- R & D, validation, standardization, testing (special cases), trainings/workshops

Web: BAM-WWW-Link, contact: PD Dr. Ernst Niederleithinger

This project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No 945098.
EU-project PREDIS: Pre-disposal management of radioactive waste

Coordination: Erika Holt, Maria Oksa (VTT)

47 partners
24.7 M€ budget

Euratom PREDIS
Objectives

• PREDIS high-level, overall objectives are to:
  Develop solutions (methods, processes, technologies and demonstrators) for future treatment and conditioning of waste across a number of MSs for which no industrially mature or inadequate solutions are currently available, improving safety during next waste management steps;
• or improve existing solutions with safer, cheaper or more effective alternative processes where they bring measurable benefits to several MSs (Member States).
• Analyse criteria, parameters and specifications for materials and packages with associated Waste Acceptance Criteria (WAC) for pre-disposal and disposal activities, supporting homogenisation of waste management processes across Europe.

These high-level objectives will be met by PREDIS having specific objectives:
1) Applying multi-disciplinary and multi-scale scientific approaches to demonstrate technical, economic and environmental feasibility of the new solutions;
2) Addressing project drivers from the end users’ points-of-view;
3) Fostering deeper cooperation between experts from many EU Member-states and across generations;
4) Training new experts in the field of pre-disposal waste management technologies;
5) Updating and revising pre-disposal guiding documents (vision, SRA, roadmap, governance and deployment mechanisms), together with the EURAD EJP executive bodies.

This project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No 945098.

Euratom PREDIS
WP7

• Compile information about the state of the art of current methods and procedures for cemented waste management with specific focus on monitoring/long-term storage
• Identify, evaluate and demonstrate store and package quality assurance (mainly NDE) and monitoring technologies
• Adapt and demonstrate digital twin technology
• Develop and demonstrate methods for data handling incl. decision framework
• Identify opportunities for increased store automation, reducing human exposure to radiation
• Identify options for post treatment of packages and potential approaches to improve package design, construction and maintenance.

This project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No 945098.

1st deliverable submitted: State of the art report:

1st milestone accomplished:
Milestone 50 – Reference package and factors affecting package evolution and degradation (WP7, Task 7.2.2)
Euratom PREDIS
WP7-T7.3: Testing and Monitoring

Our largest tool:
Muon Tomography

This project has received funding from the European Union’s Horizon 2020 research and innovation programme under grant agreement No 945098.
Our smallest tools: RFID sensors
- Temperature
- Humidity
- Pressure
- Corrosion
- ....

Subtask T7.6.1 Evaluation of technologies and developed systems from an end-user perspective
  - Develop a waste package prototype for performing large-scale trials,
  - choose and evaluate the most relevant and promising NDE/sensing techniques

Subtask T7.6.2 Demonstrating systems and methods
  - Implement the experimental set-up defined in Subtask 6.1,
  - Select the technologies to be validated,
  - perform a series of full-scale trials in a realistic testing environment

Subtask T7.6.3 Definition of potential mitigation actions and design improvements
  - Proposal of improved designs that eliminate any weak points identified during the course of the project and conceptual design for the use of the project results in automatized store concepts
More versatile and reliable condition monitoring technologies, which have been demonstrated on operating radioactive facilities and made available to end users

**Improved accuracy in predicting the behaviour of waste/packages** in stores through the integration of models with store and package monitoring information obtained using digital and machine learning technologies to enhance sampling, monitoring strategies and multi-method data fusion

**Increased safety**: reduction of exposure time to personnel connected to remediation activities, reduction of risk of RN dispersion (locally or to the environment), gaining local stakeholder trust

**Reduced cost** (20% or greater reduction in costs related to late-stage detection of damage or deterioration within waste packages)

**Minimised environmental footprint** resulting from optimised treatment, packaging and store operations.
Euratom PREDIS WP7: Deliverables

All 10 deliverables in WP7 are of the type “public” and will be made available to anybody interested in the project and its results.

Reports and publications can be downloaded from the PREDIS project website. Topics covered will be:

- innovative integrity testing and monitoring techniques and its demonstration
- digital twin and modelling technologies
- innovative data handling and decision framework technologies
- report on the economic, environmental, and safety impact

The State of the Art report is already available, other reports/articles will be published in 2023 & 2024.
Stakeholder free on-line webinar series continues in autumn 2021, addressing industry needs in pre-disposal management:

- 26.10. at 9-12 CET on PREDIS developments of geopolymers for pre-disposal waste management (WP4-6 issues)
- 25.11. at 9-12 CET on PREDIS State of Knowledge (WP3 – covering knowledge documents, training, mobility activities and opportunities)
- Q1/2022: Digital Twin technology (WP7)
- 25-27.4.2022, PREDIS Annual Workshop, Berlin, Germany
- 18-20.1.2023, International Conference on Non-destructive Evaluation of Concrete in Nuclear Application, Espoo, Finland
